FLORIDA SUNSET COLLAGE

This construction paper project is all about knowing when to trace shapes before cutting, and when to just tear with your hands! 😊 You'll need several sheets of multi-colored construction paper, scissors, pencil and glue. Watch video, pausing often.

Step 1) Trace the bottom of a coffee mug on yellow paper. Cut and glue onto your background paper (blue or purple). Center the yellow circle. But raise it so it's a little higher than just positioned in the middle.

Step 2) Cut several strips of paper into one inch slices. One by one, tear them into smaller pieces. Drizzle a small amount of glue around yellow sun in a circular motion. Add the first layer of colored paper. Repeat the pattern getting bigger and bigger. These are the sun's rays. Fill the whole paper with mosaic-like torn paper pieces radiating out from the sun.

Step 3) Use a pencil to draw a curvy line about 3" from the bottom of a vertical sheet of green paper. Cut. Glue at the bottom of your sunset paper. It's okay that this covers up some of your torn paper "rays". The green paper can either represent land (like in the video) or it can be an ocean wave. Add a strip of curvy blue paper on top of the green to create additional waves.

Step 4) Allow artwork to dry. Flip over, and carefully cut off any paper going off the edges.

BEACH BALLS

Watch the included video and learn how to draw beach balls and create an energetic pattern. For this project you need: pencil, crayons, watercolor and a thick enough paper (like a multi-media) which can handle the watercolor. Paper: try a 90 lb. or above from Walmart or Amazon.

STEP 1) Drawing a beach ball. Draw a circle. Make a dot. You'll draw three curved lines each intersecting (touching) the dot. The goal is to create six sections about the same size. Three section you will color with white crayon. The other three sections: blue, red and yellow. White goes in between each primary color.

STEP 2) Draw lots of beach balls on your paper, different sizes. Have some going off the edges. This creates the feeling of movement and energy. Outline with black crayon. Color with crayon.

STEP 3) With a paint brush and clear water, paint water over all the beach balls. Now create a watercolor "wash" by adding blue and green watercolor over the entire paper. The colors will "bleed" together nicely because you've already put water down first.

POPSICLE STICK BEACH CHAIR

If you can't get your hands on the materials, still watch the video understanding the shapes and construction of a lounge, then draw one. For full project, you'll need: popsicle sticks (Regular size popsicle sticks from Walmart, Michael's or Amazon has great colored ones. You'll need scissors and glue (ideally, wood glue) or glue gun.

Watch first 2:26 minutes of the video several times, pausing often.
4 DIY Popsicle stick chairs by Backyard Crafts: mini furniture for kids
<https://www.youtube.com/watch?v=GZMm37XDQMM>

Step 1) Create a rectangle base. Use two sticks at full length (no cutting), and two sticks cut on both ends around 2.5" inches long. On one end, let the two "long" edges stick out about 1/4".

This will create an area to build the back rest.

Step 2) Fill in the base. Cut the ends off 6-7 sticks. Cut away around 1/4". Rounded edges go out (towards where feet would go) straight edge toward the end where you will build the back rest.

Step 3) Create vertical support for the back rest. Cut two sticks in half, equal lengths. But make the cut diagonal, not straight across. The diagonal cut allows the sticks to be positioned at an angle, instead of straight up. This is important to get the reclined aspect of the lounge. Glue these two sticks vertically in the little extra area created on your main rectangle base. The diagonal cut edge goes down, rounded edge up.

Step 4) Create horizontal support for the back rest. Cut two more popsicles in equal length. These will be horizontal support for the back. Cut away the rounded edges and try your best to get them whatever length is necessary to wedge them between the two vertical back rest sticks. Glue one at the base and the other at the top of the back of the chair.

Step 5) Fill in back rest. Cut 6-7 sticks in half (or whatever length your chair requires to fill in the reclined seat). Rounded edges pointed upwards a bit past the top horizontal support.

Step 6) Legs. Cut four sticks equal length: 1" – 1.25". Don't cut off the rounded edges. Glue the flat end of each stick underneath the chair in each of the four corners. The rounded ends of the legs would be what would sit in the sand. 😊
